Noor Eyad Alshater

Cybersecurity Engineer | SOC & Network Security

Amman, Jordan | nooralshate@gmail.com | +962 789 868 444 | LinkedIn | GitHub | Project Repository

PROFESSIONAL SUMMARY

Cybersecurity professional with hands-on training and technical project experience in identifying security vulnerabilities, investigating suspicious activity, and building practical security lab environments. Combines analytical problem-solving with technical capabilities across security operations, web and network security, penetration testing, and Linux-based environments.

TECHNICAL SKILLS & TOOLS

Security Operations & SIEM: Splunk, Log Analysis, Alert Investigation, Threat Hunting, MITRE ATT&CK

Penetration Testing & Web Security: Nmap, Nikto, Metasploit, Burp Suite, Hydra, John the Ripper, WPScan, enum4linux

Digital Forensics & Malware Analysis: FTK Imager, Autopsy, ExifTool, File Hashing, Static and Dynamic Analysis

Networking & Operating Systems: Wireshark, Kali Linux, Ubuntu Server, Windows, Linux CLI, VirtualBox, Apache, MariaDB

Programming & Scripting: Bash, Python (Pandas), HTML, CSS, JavaScript

Assessment & Reporting: Vulnerability Assessment, Risk Assessment, Technical Reporting, Remediation Recommendations

PROJECTS

EduKernel Suite – Multi-Image Cybersecurity Lab Repository

Graduation project built by a team to cut the time students lose configuring virtual machines and security tools before practical lab sessions. The environment combines Kali Linux, Windows 7, and Windows 10 to support penetration testing, malware analysis, reverse engineering, digital forensics, and web and network security. **My contribution** was building and configuring the Windows 7 and Windows 10 virtual machine images and preparing their security tools, including Immunity Debugger with Mona.py and IDA Free. The university adopted the project for practical cybersecurity training.

Matomo Deployment & Security Assessment

- Deployed Matomo on Ubuntu Server with Apache and MariaDB and assessed it with Nmap and Nikto, without active exploitation. Findings included an exposed Apache server-status page, missing security headers, and information disclosure, each with a remediation recommendation.

Digital Forensics – Disk Image Analysis

- Created a forensic image with FTK Imager, confirmed its integrity with matching MD5 and SHA-1 hashes, and analyzed files and metadata in Autopsy.

Cybersecurity Risk Assessment – Unencrypted Credit-Card Data

- Co-authored a risk assessment of unencrypted credit-card data on a retail server, classifying risks by severity, analyzing qualitative and quantitative impact, and estimating mitigation time and cost.

TRAINING

Amman 42 – Cybersecurity Training Oct 2026 – Present

- Ongoing practical training in web application vulnerability identification and analysis, Linux command-line operations, and cryptography, alongside web development exercises.

Masar Cybersecurity Training Program – NCSC & IT Security C&T Jul 2025 – Sep 2025

Ethical Hacking & CTF Track | 200 Hours

- Investigated simulated brute-force, cross-site scripting (XSS), and command-injection alerts using Splunk, applying MITRE ATT&CK concepts in threat-hunting exercises.
- Practiced vulnerability assessment, penetration testing, and malware analysis, and documented findings with technical evidence, severity ratings, and remediation recommendations.

EDUCATION

Tafila Technical University – Bachelor's Degree in Cybersecurity Oct 2022 – Jun 2026

GPA: 81.07/100 (Very Good)

LEADERSHIP & ACTIVITIES

IEEE Cybersecurity Society, TTU – Public Relations Officer Jul 2023 – Jul 2026

- Helped organize cybersecurity workshops and awareness events and contributed to digital content that reached 1.7M+ views in under one month.
